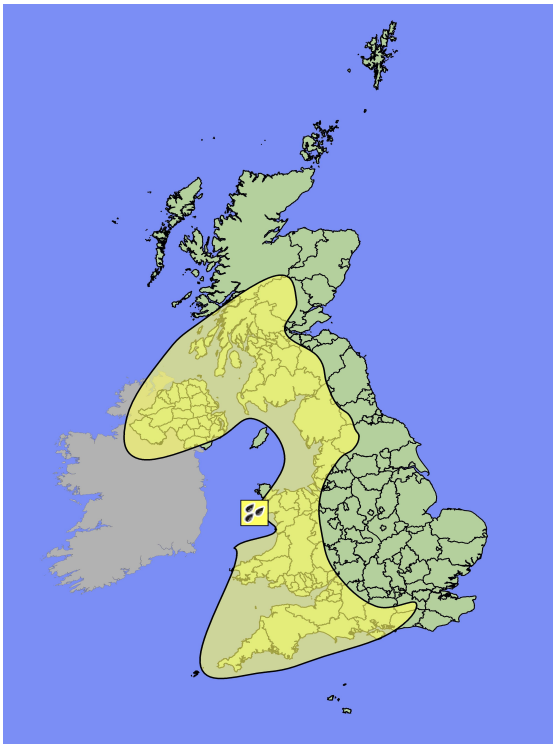
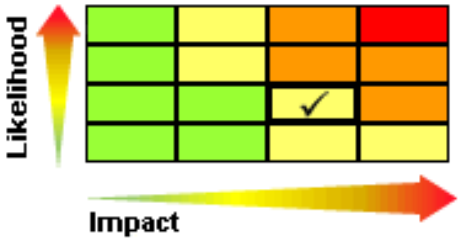
National Severe Weather Warning Service





Chief Forecasters Assessment
A further area of low pressure will move northeast across the UK during late Sunday and Monday. Associated frontal systems will bring another spell of wet weather, accompanied by gales in places. The heaviest, most persistent rain will be over higher ground in the west, where we can expect 20-40 mm, perhaps in excess of 60 mm over the highest hills. Lowland areas and southern counties may see up to around 20 mm before the rain gradually clears eastwards and wind eases during Monday afternoon. There is also the potential for some hill snow over northern Scotland before the clearance.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **18:00 on Sun, 30th Dec 2012** until **18:00 on Mon, 31st Dec 2012**

A spell of wet, very windy weather will affect the whole of the UK later Sunday and during Monday.

Many western and northern regions can expect persistent rain, heavy at times, later on Sunday and during the first part of Monday, particularly over high ground. The rain will clear eastwards from these areas by Monday afternoon, but at the same time extending eastwards across southern areas of England, perhaps not clearing some southern counties of England until evening.

The public should be aware of possible disruption, particularly to travel, and also of the potential for localised flooding.
